Computer Science Undergraduate | Software Development & Technical Support

PROFESSIONAL SUMMARY

Computer Science undergraduate with hands-on experience developing Python applications, implementing automated tests, debugging software, and working with databases and version control. Experienced in building personal and collaborative projects with an emphasis on maintainability, reliability, and continuous improvement. Enjoys solving technical problems and is eager to learn new technologies, collaborate with developers, and contribute to real-world software development.

SKILLS

Programming: Python, Java, C/C++, JavaScript, SQL
Software Development: Debugging, REST APIs, Git, Code reviews, Application maintenance
Testing & Quality: Pytest, Automated Testing, Ruff, Bug Investigation
Databases: Postgres, SQLite, Relational Database Design
Automation & Deployment: Python Scripting, GitHub Actions, DevOps, Linux/Unix, Systemd
Technical Practice: Technical Documentation, Troubleshooting, Data Validation

PROJECTS & OUTSIDE EXPERIENCE

CleanSheet - Spreadsheet Data Processing & Automation - *Link to project*
- Developed a Python desktop application for spreadsheet concatenation, data-quality validation, and data cleaning.
- Implemented chunked CSV processing and background execution to improve responsiveness when handling large datasets.
- Added automated tests and CI workflows to validate code quality and support reliable releases across Windows and Linux.

SortFlow — Automated File Organization Utility - *Link to project*
- Built a Linux file-organization utility that monitors Downloads and automatically sorts files by type.
- Implemented file-stability checks, queued processing, duplicate handling, and rotating logs to improve reliability.
- Added automated tests for edge cases and configured a systemd service for background execution.

AutoVal — Car Valuation & ML Analytics Platform - *Link to project*
- Served as Project Lead and Database/Backend Engineer for a web application that predicts second-hand vehicle values.
- Developed data-processing workflows to clean and prepare 100,000+ vehicle listings for database storage.
- Designed PostgreSQL schemas and data-access components and coordinated backend integration through code reviews and pull requests.

EDUCATION

Pampanga State University **August 2025 - May 2029**
Bachelor of Science (BS), Computer Science *GPA: 1.18*

Relevant coursework: Data Structure, Database Management System, Object-Oriented Programming

LEADERSHIP & ACHIEVEMENTS

Technical Lead — PyTorch Philippines *(2026–Present)*
- Appointed to support technical planning, project development, and collaborative learning within the community.

RAITE Regional Programming Competition — 2nd Runner-up, 2025
- Placed 3rd in a regional programming competition involving 18 universities in Region III as part of a two-person team.

CERTIFICATION

Intro to Machine Learning — Kaggle, 2026
Microsoft Office Specialist: Excel Associate — Microsoft, 2025
